

Twilio — Credential Setup Guide

This guide walks you through creating a Twilio account and getting a phone number so your AI agent can make and receive voice calls. No coding required.

Start the phone-number step early. Indian phone numbers require a regulatory/KYC approval that takes **1–3 business days**. The account itself takes 5 minutes.

What we need from you (the end goal)

#	Credential	Looks like
1	Account SID	starts with AC . . . , 34 characters
2	Auth Token	a 32-character string
3	Phone Number	in international format, e.g. +9180XXXXXXX

How to send these securely is at the bottom.

Step 1 — Create a Twilio account

1. Go to <https://www.twilio.com/try-twilio>
2. Sign up with your **work email** and a password
3. Verify your **email** (click the link they send)
4. Verify your **phone number** (enter the code they text you)
5. When asked a few onboarding questions: - "Which Twilio product?" → **Voice** - "What do you want to build?" → **Voice / IVR** (or skip) - "How do you want to build?" → **With code** (or skip)

You'll land on the **Twilio Console**.

Step 2 — Copy your Account SID and Auth Token

1. On the Console **dashboard home** (<https://console.twilio.com>), scroll to **Account Info**
2. **Account SID** ← *credential #1*
3. **Auth Token** — click **Show** to reveal it ← *credential #2*

Keep the Auth Token private — it's like a password for your whole account.

Step 3 — Add funds

Twilio is pay-as-you-go. A trial account works for early testing but is limited (it can only call verified numbers and prepends a trial message).

1. Go to **Admin** → **Billing** (or **Billing** in the top menu)
 2. Add a payment method and a small starting balance (e.g. \$20) is plenty to begin
 3. To remove trial limits, click **Upgrade** when prompted
-

Step 4 — Complete India regulatory requirements (Indian numbers only)

India requires a **Regulatory Bundle** (KYC) before you can buy a local number. This is a one-time process.

1. Go to **Phone Numbers** → **Regulatory Compliance** → **Bundles**
2. Click **Create a Regulatory Bundle**
3. Choose **India** and the number type you want (Local / Mobile / Toll-Free)
4. Provide: - Business name and address (must match your documents) - A **business registration document** (GST certificate, incorporation cert, etc.) - An **address proof** (utility bill, rental agreement, etc.) - An authorized representative's ID
5. Submit

Lead time: 1–3 business days for Twilio to approve the bundle. You can do Steps 1–3 immediately and just wait on this one.

Step 5 — Buy a phone number

Once your regulatory bundle is approved:

1. Go to **Phone Numbers** → **Manage** → **Buy a Number**
2. Set **Country = India**
3. Tick the **Voice** capability checkbox (we need voice; SMS is optional)
4. Search, pick a number you like, click **Buy**
5. Attach the approved regulatory bundle if prompted
6. Note the number in full international format, e.g. +9180XXXXXXX ← *credential #3*

Don't worry about configuring the number's webhook URL — our team does that once we connect it.

How to send us the credentials (securely)

The Auth Token can control your whole Twilio account, so **please don't paste it into plain WhatsApp or email**.

Preferred options (any one): - A password manager shared note (1Password, Bitwarden "Send", etc.) - A temporary secret-sharing link (e.g. <https://onetimesecret.com>)

Send us this filled-in checklist:

Account SID:	AC
Auth Token:	
Phone Number:	+91

Quick troubleshooting

Problem	Fix
Can't buy an Indian number	Your regulatory bundle isn't approved yet (Step 4). Wait for the email.
"Trial account" message plays on calls	Upgrade the account (Step 3) to remove trial limits.
Number search returns nothing	Loosen filters — try a different city/area code, or Mobile instead of Local.
Lost the Auth Token	You can rotate it from Account Info → but tell us first, since the old one stops working immediately.
